Abstract

1. Newton said there is gravity.
2. Einstein said the EFFECT of gravity: spacetime curvature.
3. Now, I say the SOURCE of gravity: “Crewill”.

1 Introduction: Crewill

i. The Destruction of Physics

All of science is built upon one foundational assumption: The “world” exists first. After that, science tests how it exists. Therefore, science is Inevitably untrue: Whether science is true depends on what you use **Priorly** to test it that is a symbol of Crewill—

ii. Genesis: The Unity of Physics

Crewill implies *the will to power* [1]: The “world” doesn’t exist first but definition. “World” was generated after an assumption was defined. Therefore, the direction of resultant defining is that of world generating.

2 The Beginning of the Universe

No Crewill, no universe.

At the beginning of no Crewill, the universe is absolutely chaotic which represents a state of maximum entropy [2]. In this state, the universe has infinite probabilities in superposition [3].

After Crewill (including will to explore), the universe gradually decoheres to generate a specific world (as shown in figure 1). The direction of generating follows that of Crewill which leads the chaos, entropy, probabilities and superposition low down. Therefore, complete coherence is unmeasurable: Once measured, decohere [4]. The decoherence has also happened, even though electron interference patterns appear whose degree is just less than disappearing.

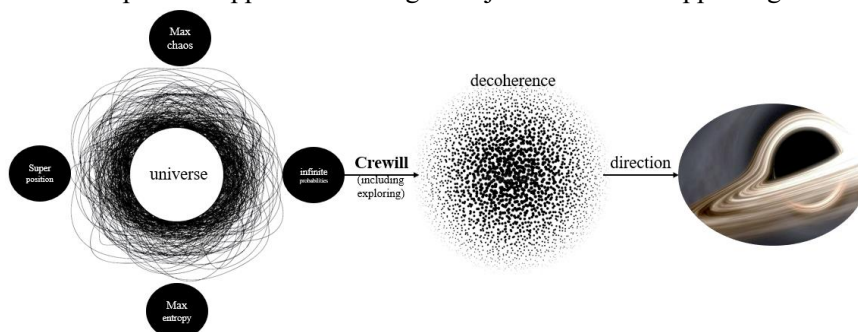

Figure 1. Genesis

In the end, what exists is Crewill’s assumption of science not science itself, even Relativity [5]

¹All contributions, including conceptual design, research, implementation and manuscript writing, were completed independently by the single author,—Ozymandias Tang.

and Quantum mechanics [3].

Afterword

引力大到连光都无法逃逸，天使不得不一生忠于上帝。
两个造物主的结合，我愿称之为结婚；反之，我愿称之为进化。
